

INSTALL WIRELESS GLASS BREAK DETECTORS

5 -1 INSTALLING A WIRELESS GLASS BREAK DETECTOR

1- Unpack the Honeywell wireless glassbreak detector package and lay out all of the included parts. Remove the plastic covering & locate the gray 3M mounting tape, if purchased. Wireless motion detectors proceed to 5-2.

2- Remove the RFID sticker from the rear of the glassbreak and place on the provided spaces on the following page.

3- Open the cover of the wireless glassbreak by locating the small flat indentation on the one end and using a flathead screwdriver to gently pry open and release the cover lid as pictured.

4- Remove the battery connector tab by pulling on the plastic tab labeled "PULL TO CONNECT" this will complete the battery circuit.

5- Determine the best location for the glass break by the following priority list-

Top priority - Rear sliding glass door area

Second priority - Rooms at ground level in rear of home, or with ground cover in form of landscaping, natural cover or rooms with many windows.

6- Optimal mounting height 6.5' - 7.5' from floor, on walls opposite of the glass to be protected. Do not mount near entry doors, door bells, near heavy curtains or on the same walls the glass is on that you are protecting.

a) Example of a good location is near a door or archway trim facing a rear sliding door with the detector level with the top of the trim in a kitchen area.

7- Suggested tip: Turn the glass break sensitivity to MEDIUM by moving switch #1 to the ON position near the battery. This will cut down on false alarms, and if mounted within 20' of glass should not affect performance.

8- Attach the glassbreak to the wall with supplied double sided tape (GOOD) or 2 screws & drywall anchors (BETTER). Mark the mounting holes with a pencil, pre-drill the 2 mounting holes, insert drywall anchors and fasten with supplied #6 x 1 1/2" screws. Close cover firmly.
